

## SNC-LAVALIN CONSTRUCTORS INC

---

# Environmental Policy

### Our Long Term Objectives

**We at SNC-Lavalin Constructors Inc. (SLCI) believe that as a major engineer and constructor of thermal power generating facilities we are in a unique position to bring the benefits of electricity to all people and move the world toward sustainable power generation. Through our standing and market presence, we can set new standards and positively influence the future of power generation.**

SLCI recognizes that as an engineer and constructor of thermal power generating facilities, we have an opportunity and the responsibility to contribute to the solutions for sustainable power production and reduce the emission of greenhouse gases. We can have a positive impact on our market in the areas of design, procurement, construction, and the operations of generating facilities that power the world. To take full advantage of our expertise and dedicated employees, we are committed to implementing a proactive environmental management system for our activities and products wherever we can.

Our vision is to be a high integrity, creative, locally and globally focused engineering, construction, and energy solutions company committed to the continuous improvement of our ability to protect the environment. As we work to improve the quality of our products and services, we also strive to provide energy solutions that preserve the environment and lower our global and regional footprint. We will realize this vision through the evaluation of the environmental aspects of our operations, compliance with all relevant laws, regulations, and standards, pollution prevention efforts, and waste minimization.

- Reduce the resources consumed in the course of doing business by championing energy efficiency and reducing our carbon footprint
- Minimize the negative impacts of our operations on the environment
- Explore alternate forms of electricity generation and analyze their potential for development to reduce emissions of greenhouse gases associated with Climate Change
- Proactively select materials that are less toxic and use products containing recycled content
- Reduce harmful emissions from projects, road vehicles, mobile and stationary equipment and processes

At SLCI, we aspire to continually improve the environmental attributes of our projects, products and services by being cognizant of the negative environmental aspects of our business and working to reduce them, with the goal of becoming known to our customers and communities as an environmentally responsible construction and energy company.
